Definitions

H-Score® (0 weakest - 100 strongest)

The H-Score analyses the published financial fundamentals and other factors from seven different points of view. It is an objective measure of the overall financial strength of any company in comparison with all other companies. Companies with an H-Score of 25 or lower are in the Warning Area and may be vulnerable. Such companies should be viewed with care. Any company outside the Warning Area has a very low likelihood of incurring financial distress or bankruptcy.

PoD® (Probability of Distress)

Displayed only for companies with an H-Score of 25 or less, the PoD gives the statistical likelihood of a company failing or undergoing a major financial reconstruction in the next 3 years.

Strengths & Weaknesses - Key H-Score components (0 weakest - 100 strongest)

Management Scores measure the company simultaneously from seven points of view. Together they are the basis of the calculation of the H-Score. The seven measures are summarised into 3 Management Scores:

- **Profit Management Score** - The degree to which earnings contribute to minimising financial risk.
- **Asset Management Score** - The strength of liquidity & management of Working Capital.
- **Funding Management Score** - Adequacy of the capital base, dependencies on debt and the degree to which the Tangible Assets are funded by Current Liabilities.

Key Dates

- **Snapshot Date** - The date this snapshot was published on the Bloomberg terminal.
- ***Valid to Date** - The H-score and related measures are valid for a year from the Key Financial Date unless more recent financials are published.
- **Key Financials Date** - These are the latest (year-end/interim/quarterly) publicly available financials at the Snapshot Date.
- **Stock Info. Date** - This is the latest stock information available at the Snapshot Date.
